

### DEVELOPMENT OF MANAGEMENT SKILLS OF FUTURE SPECIALISTS AS A PEDAGOGICAL PROBLEM

*Eshankulova Nargiza Xayitmuratovna*

#### **Introduction**

Training of highly qualified pedagogical personnel, meeting the requirements of the time processes are currently the main requirement of the international labor market. This is because that is, in society, a freethinker, who can easily manifest himself, is objective to himself very important are those who make an assessment from the typewriter. They are the movers of the progress of society are counted. This in turn leads to the development of professional competency of specialists an innovative form of teaching, which adds a great deal and refreshes the content of Education advanced foreign in teaching methods, modern Information Communication Technologies creates the need for extensive practice of experiments. In this respect, nowadays further raising the quality of education in educational institutions, mutual continuity of Educational Directions and a number of measures are being implemented to ensure continuity.

An important role in the image of a modern teacher is played by the embodiment of perfection. The development of the professional competence of the teacher of today is his daily competence, the work process consists in increasing productivity. Formation of professional skills in business activities by studying and solving problems related to it, forming professional training qualified specialists can be trained. Their professional training in higher education setting the level, the aspects that meet the requirements in it, as well as the existing disadvantages and on the basis of the identification of gaps, the determination of the actual needs for education performed carried. Based on this, it is advisable to introduce innovations into life. This gives leads to the development of pedagogical competence. Important during training sessions another of the cases of importance is the study processes of students in their it consists of organizing and focusing on the student's personality based on their needs.

These include interest in knowledge in students, a sense of duty in them, as well as responsibility in the educational process formation techniques also include. In the further improvement of pedagogical processes it is important to organize and develop the collaborative work activities of the subjects, to achieve each of the effectiveness of the development of their activity in the system of goals and objectives in terms, it is inextricably linked to existing motives and motivations. Education sector-society it is a social institution that reflects all its problems. In modern education, it is necessary to enrich and improve spiritual values, through educational activities it is necessary humanization, educational activities with spiritual and educational promotion through activation, through pedagogical-psychological support, the highest spiritual, it is necessary to educate responsible, creative, competent individuals. Spiritual enlightenment of the individual exaltation from the side is now an important issue of education, for which first of all it is important that the teacher himself has a high level of spiritual and educational competence. Spirituality-the enrichment of the inner world, aimed at opening up a person's own personal potential the appearance of adjectives associated with.
