

QUESTIONS OF TEACHING PROFESSIONAL TERMINOLOGY

Kenjayeva Kamila Anvar qizi
TIAME, Teacher

Annotation: This article addresses the issues surrounding the teaching of professional vocabulary in contemporary settings. It explores the significance of mastering specialized terminology for effective communication and career advancement. The main methods for teaching professional vocabulary, such as intensive reading of specialized materials, utilizing specialized dictionaries, and engaging in professional discussions, are discussed. The article emphasizes the importance of organizing and learning key terms specific to a particular field, as well as the necessity of continuously updating and expanding one's professional vocabulary for the successful career development of professionals.

Key words: Professional vocabulary, training, problems, terminology, translation, context, individual needs, learning materials, effectiveness, personalized approach, communication, motivation, career growth, contextual examples, learning tasks.

Professional vocabulary plays a key role in successful communication in the work environment and is an integral part of professional career development. Knowledge of specialized terminology not only facilitates the understanding of professional concepts, but also contributes to effective work in the chosen field of activity. However, teaching professional vocabulary can face various problems, ranging from a lack of high-quality educational materials to a lack of a personalized approach to the needs of students.

This article will consider the main problems faced by both teachers and students when studying professional vocabulary, as well as suggest ways to solve them. We will consider the issues of ambiguity in the translation of specialized terms, the lack of contextual inclusion in the educational process, insufficient attention to the individual needs of students and other aspects that affect the effectiveness of teaching professional vocabulary. Understanding and solving these problems are important steps in improving the quality of education and successfully mastering the necessary knowledge and skills for professional growth.

There are four main problems of teaching professional terminology:

1. Lack of specialized educational materials: Insufficient number of high-quality textbooks and educational resources covering a variety of professional topics and terminology creates a problem in accessing the necessary materials for teaching professional vocabulary.
2. Ambiguity in the translation of specialized terms: The translation of specific professional terms into other languages can be problematic due to differences in terminology between different languages, which makes it difficult to effectively teach and use professional vocabulary.
3. Lack of contextual inclusion in the educational process: The lack of practical tasks and contextual examples of the use of professional vocabulary in educational programs can make it difficult for students to successfully master this material.
4. Insufficient attention to the individual needs of students: Failure to take into account the specific needs and interests of students when teaching professional vocabulary can lead to insufficient motivation and difficulties in mastering new terminology, which complicates the learning process.

Problem No. 1: Ambiguity of translation of specialized terms.

One of the main problems in teaching professional vocabulary is the ambiguity of the translation of specialized terms. Many professional terms have a narrow specialization and do not always have an unambiguous equivalent in another language. When translating such terms, difficulties arise related to choosing the most appropriate equivalent that conveys the exact meaning and context of using the original term.

Ambiguity in the translation of specialized terms can lead to misunderstandings and incorrect use of terminology by students. This creates confusion and complicates communication in the professional field, which can lead to mistakes in work and misunderstanding of key concepts. To solve this problem, it is necessary to conduct a thorough analysis of professional vocabulary, compare different translation options and explain to students the contextual meaning of each term. It is also important to use examples from real professional practice to illustrate the use of specialized terms and to help students understand their meanings in the context of a particular industry or field of activity.

Problem No. 2: Ambiguity of translation of specialized terms.

The translation of specialized terms into other languages presents significant difficulties due to the variety of ways to convey meanings and nuances. This is especially true in the context of professional vocabulary, where the accuracy and unambiguity of understanding terms are key. Differences in terminology between languages can lead to translations that do not convey the full meaning or context of specialized terms. The problem arises from the fact that some professional concepts and terms may be unique to a particular field of knowledge and may not have a direct equivalent in another language. This creates difficulties not only in teaching and understanding professional vocabulary, but also in translating high-quality educational material for students studying a foreign language.

There is often a need for clarification and interpretation of specialized terms to eliminate ambiguities and errors in their translation. This requires teachers and translators to have a deep understanding of the specifics of using professional vocabulary in different contexts and ensures the need for continuous improvement and expansion of students' vocabulary so that they can successfully master professional terminology and apply it in practice.

Problem No. 3: The lack of contextual inclusion in the learning process.

The lack of contextual inclusion in the educational process when teaching professional vocabulary can complicate the assimilation and understanding of new terms by students. Context plays a key role in helping students see real-world situations in which professional vocabulary is used, which contributes to more effective assimilation and application of terms. Without appropriate contextual examples and assignments, it can be difficult for students to see the connection between the words being studied and their specific use in the professional field. This leads to a superficial understanding of vocabulary and makes it difficult for students to apply new terms in practice.

To solve this problem, it is necessary to include educational materials with real texts, situations from professional life and cases that demonstrate the use of professional vocabulary in a real context. This approach will help students to better assimilate terminology and understand how these words interact in specific areas of knowledge. In addition, the active use of new terms in various contexts and practical tasks contributes to a deeper assimilation of professional vocabulary by students.

Problem No. 4: Insufficient attention to the individual needs of students.

Insufficient attention to the individual needs of students when teaching professional vocabulary can lead to a decrease in the effectiveness of the educational process. Each student has their own level of knowledge, interests and specific needs for the study of professional terminology, and their consideration plays an important role in the successful development of the material.

The lack of a personalized approach and adaptation of the educational program to the individual needs of students can lead to a loss of motivation of students, ineffective assimilation of material and difficulties in mastering professional vocabulary. Some students may need additional explanations, exercises, or practice assignments to gain a deeper understanding of the terms, while others may need more practice using terminology in practice.

To solve this problem, it is necessary to carry out an individual diagnosis of students' needs and adapt the educational process to their specific requirements. It is important to provide a variety of educational materials, tasks and teaching methods, taking into account the level of training and interests of each student, in order to ensure effective assimilation of professional vocabulary and maximum development of their language skills.

Conclusion:

Teaching professional vocabulary is an important aspect of the formation of language skills and professional competence. In the course of studying this topic, various problems arise, such as the ambiguity of the translation of specialized terms, the lack of contextual inclusion in the educational process, and insufficient attention to the individual needs of students.

To effectively overcome these problems, it is necessary to actively introduce contextual tasks and materials into the educational process, provide a personalized approach to the needs of students, as well as create conditions for a deeper and meaningful assimilation of professional vocabulary. Teachers and students should cooperate and strive to enrich their vocabulary, which will allow them to successfully overcome the difficulties associated with learning professional terminology. Continuous improvement of teaching methods, taking into account the specifics of branches of knowledge and individual characteristics of students are key factors for effective mastery of professional vocabulary. Improving the quality of education in this field contributes to the successful careers of graduates and provides them with the necessary tools to advance in their chosen professional field.
