Turdibayeva Maftuna Qodirqul qizi

A student of Gulistan state pedagogical institute

maftunaegamnazarova057@gmail.com

Anotation: Detailed information is given about current methods of teaching in the current modern education process.

Key words: Modern education, modern technologies in education, current methods of teaching.

The most important and central issue of the pedagogue's innovative activity is the effective and high-quality organization of the educational process. There are various methods of teaching. The teacher is looking for the possibility to reach the goal, no matter what method he teaches, in this regard, he uses educational methods and innovative methods. " Educational methods have been showing their effectiveness until now, and modern teachers are trying to get better results by teaching in a new way"

"The purpose of teaching is that the planning of knowledge and observation in the state educational standards is delivered to the learning. When the knowledge is accepted and understood by the student, it can be considered that the learning experience has passed. It is known that the process of learning is the process of educational development of spiritual and mental contents, the process of acquiring knowledge and parts of things obtained from acquired knowledge".

It is known that the implementation of advanced pedagogy and new information technologies in education not only increases the effectiveness of training sessions, but also in the education of an independent and logically thinking, well-rounded and highly moral person by applying the achievements of science in practice. is important. Today, the teacher is required to use advanced pedagogical and new information technologies in the educational process. Based on the above, based on our experiences, we will present our thoughts on the ways of teaching and training by using interactive methods in classes. We think that it will provide practical help to our colleagues in improving the effectiveness of training sessions. Also, it becomes one of the close assistants of students in fulfilling the responsible task of choosing their own direction and forming the skills of preparation for independent life. the most important requirements are the effectiveness of the lesson, its quality, the knowledge and skills of the students, the various educational activities in schools, their organization and the acquisition of various knowledge and skills by the students through it. Today, the role of innovative technologies, technical tools, including modern computers, in the correct and effective organization of the educational process is incomparable. The use of multimedia, animation, graphics, slides and videos on the subject of the lesson helps to make the lesson process more interesting, and for this, the teacher can work on himself and start each lesson with "what is new about today's lesson process?" "Can I come in and organize the lesson in an interesting way?", that is, he should avoid traditional education and strive to provide non-traditional education." When organizing the lesson process with the help of modern information technologies, the teacher first:

- the purpose of the lesson;
- ways to achieve the goal;
- methods of presenting educational materials; - teaching methods;
- types of educational assignments; - questions for discussion;
- ways of organizing discussions and debates; - it is necessary to identify factors such as methods of interaction and communication.

Modern education includes current methods of teaching, the introduction of new technologies into teaching, and interesting and effective teaching methods for students. The following are a few current methods that are widely used in modern education:

1. **Interactive lessons:** Interactive lessons involve students using interactive tools, such as interactive whiteboards, tablets, computers, or smartphones, to learn course material. This method allows students to participate in their own activities and implement learning during the learning process.
2. **Distance Education:** Distance education provides learning based on geographical distance between students and teachers. In this method, virtual textbooks, webinars, online lectures and Internet resources are used in the learning process. Distance learning allows for continuous learning and helps students learn their own interactions.
3. **Practice-based learning:** Practice-based learning gives students a focus on practice-oriented learning. In this method, students are advised to learn theoretical knowledge by putting it into practice. Practice-based learning involves developing skills and competencies for students.
4. **Group activities:** Group activities aim to develop students' ability to cooperate with each other and work in society. Students learn by interacting with others in groups, solving problems, working on projects, and collaborating with the community.
5. **Creative Learning:** Creative learning allows students to discover their own strengths and express themselves creatively. In this method, students are encouraged to learn by expressing their ideas, engaging in creative exercises, and participating in the creation process.
6. **Virtual Reality (VR) and Augmented Reality (AR):** VR and AR technologies help to make education more interesting and effective. Students interact through virtual or augmented reality, increasing the level of interactivity in the learning process. This method allows students to practice, study 3D objects, work in virtual laboratories, and learn about the real world.

These methods represent only some tens of several actual methods of modern education that are actively used. Teachers and educators can learn and use teaching methods that are appropriate for each student and interaction. When choosing teaching methods, it is important to consider factors such as students, characteristics of the learning environment, subject concepts and interactions.

Modern education is a concept that represents educational processes and teaching methods of the 21st century. This concept focuses on technology, innovation and students putting knowledge into practice. The main goal of modern education is to develop students' creativity, problem solving, critical thinking and collaboration skills and prepare them to be successful in a global society.
